Experience:

Bershka (Inditex)
2022 - Present

- Customer service and support in purchase decision-making
- Teamwork in a fast-paced environment, with a strong focus on standards and processes
- Critical observation of internal processes and software

Personal Projects
2025 - Present

- Building web solutions on real-world utility, clear UX, and a robust structure
- API integration, state management, databases, and document export

I'm a curious person, driven by learning and by solving real problems through simple software solutions.

I've been dedicating myself to personal projects involving management systems and full web platforms, always focusing on clarity, usefulness, and a great user experience. I enjoy working with rigor, attention to detail, and well-thought-out processes.

Education:

Technician Course in Programming
2016 - 2019

- Rafael Bordalo Pinheiro Secondary School

Computer Engineering
2019 - 2024

- Polytechnic Institute of Leiria

Front End Engineer Carreer Path
2025

- Codecademy

Skills:

- TS/JS
- React
  - Redux Toolkit
  - React Router
- Tailwind CSS
- REST APIs
- PostgreSQL
- Node.js

Languages

- Portuguese - Native
- English - C1

Strengths:

- **Self-driven** - I learn quickly and independently
- **Attention to detail** - Focused on quality and consistency
- **Systems thinking** - I understand the "why" before building
- **Rigor** - Structure, documentation, and organization
- **Communication** - Clarity, alignment, and collaboration

Hobbies

- Reading
- Walking
- Gaming

Rodrigo Reis

Cover Letter

I'm a web developer focused on building useful, clear, and well-structured software, with an emphasis on simple products that solve real problems.

I have a background in programming and a track in Computer Engineering. Over the last few years, I've been directing my work toward building web solutions with product ambition, paying close attention to detail, user experience, and technical consistency.

I started my professional life at 14 as a seasonal agricultural worker in my uncle's company. That experience taught me discipline, responsibility, and the importance of completing tasks with rigor, even when conditions aren't ideal. In 2022, I joined Bershka (Inditex) and, although it wasn't an area directly related to programming, it was a demanding environment that helped me develop essential skills such as communication, execution pace, teamwork, attention to detail, and respect for processes. It was also where I gained a strong appreciation for organizations that invest in solid internal systems because great teams make a difference, but strong processes and good software make teams even better.

On the technical side, I've been strengthening my foundations in programming and systems and, since 2025, I've been working intensively on personal projects, with a focus on API integration, code organization, and a simple, well-designed user experience.

Among the projects I'm currently developing, I'd highlight a platform for creating and managing budgets and services with PDF export, designed for users with low digital familiarity, where I prioritize simple workflows, explicit layouts, and flexibility for customization. I also built an event-based location-sharing app with geofencing and alerts, as well as a task management prototype tailored to a retail/store context to speed up internal communication and reduce execution errors.

I identify with a way of working grounded in curiosity, rigor, and continuous improvement. I like to understand the "why" before building, design solutions with structure, and deliver clarity both in the code and in the final experience.

I'm looking to grow even more through real challenges, contribute with strong execution, and develop in an environment where quality, product, and learning are taken seriously.
